Abstract (en)  
[origin: CA2933743A1] The invention relates to a washing device for elongated profiled sections (7) which have been cut to length, comprising a drum (5, 6) which can be rotated about a horizontally aligned rotational axis (3, 4) and which comprises a plurality of receiving areas (8, 9) that are arranged adjacently along the circumference of the drum, elongated profiled sections (7) aligned along the longitudinal direction (L) being insertable into said receiving areas, and comprising a receiving opening (11) for the elongated profiled sections (7), a discharge opening (12) for the elongated profiled sections (7), and an upper transport path (To) for the elongated profiled sections (7), said transport path running between the receiving opening (11) and the discharge opening (12). The upper transport path (To) passes the rotational axis (3, 4) on the transport path side facing away from the ground, and an opening width of the discharge opening (12) can be adjusted in the circumferential direction.
