Abstract (en)
[origin: WO2015096895A1] The invention relates to a conveying unit for conveying persons, characterized by at least one structure-borne-noise transmission area (104) which is directly or indirectly impinged upon by a structure-borne-noise transducer (106) designed to produce vibrations which, when a person touches the structure-borne-noise transmission area (104), are transmitted as structure-borne noise by the body of the person, and can be acoustically perceived by said person.
