Abstract (en)

[origin: CA2934605A1] The invention relates to a method for the continuous dearomatisation of a petroleum fraction to form a hydrocarbon fluid with a very low sulphur content and a very low aromatic compound content, comprising at least one step of catalytic hydrogenation at a temperature of between 80 and 180°C and a pressure of between 50 and 160 bars. The catalytic hydrogenation step of said dearomatisation method comprises a plurality of interchangeable reactors connected in series.
