Abstract (en)
[origin: WO2015096891A1] The invention relates to a safety system (59) of a hammerless self-loading pistol (1) with a movable safety element (61) which can assume a safety position in which the safety element engages into the movement path of a firing pin (17) before a shot is fired and a release position in which the safety element is located outside of the movement path of the firing pin (17). The invention is characterized in that in the safety position, the safety element (61) catches the firing pin (17) after the firing pin has advanced over a defined travel distance. The invention also relates to a self-loading pistol equipped with such a safety system.
