Abstract (en)

[origin: WO2015097305A1] The invention relates to a method for monitoring properties of a mixture M of n components, said mixture having properties $x(B, u)$, wherein u is a recipe vector, B is a matrix of the properties of the n components, and $x(u)$ is a vector of the k properties of the mixture M. The mixture also has at least one emission property $R(u)=R(y(x(u)), z(x(u)))$ representative of a product emitted by said mixture during the use thereof, wherein $z(x(u)) = y(x(u)) - x(u)$ $y(x(u))$ is a vector of the properties of the mixture. The method monitors said recipe u such that said resulting mixture M complies with the specifications $R_j < R_j(u)$ and / or $R_j(u) \leq R_j$ for each emission property R_j , $j=1, \dots, q$, R_j , R_j being acceptable minimum and maximum values, respectively, of said induced property R_j . Said monitoring includes estimating an emission property $R(u)$ of a mixture M of properties $x(u)$ determined beforehand, $R(u)$ being a function: of predetermined properties $x(u)$ of the mixture; of functions $y(x(u))$ and $z(x(u))$ associated with said predetermined properties, and subjected to disjunctive conditions which, for each property x_k , attribute to y_k at least one value selected among x_k , m_k , and M_k , in accordance with one or more inequalities between said value x_k and m_k and M_k , wherein m_k and M_k are predefined constants and x_k is the value of the property k for a recipe u .
