Abstract (en)

The device object of this invention comprises a crosspiece (1) that is intended to remain integrated into the building works and which has a double use, since on the one hand it performs the usual function of crosspieces, contributing to maintain the distance between tiles and aiding in their alignment, and on the other hand, due to the possibility of incorporate an external element (2), it allows providing the tiled surface with a decorative or functional finish without having to drill the tiles that are covering such surface. To do this it comprises a base that remains attached to the building work and an outer body that incorporates the decorative or functional element, such base and body being joined by the same geometry of a pedestal (4) joined to the outer body and an opening provided in the base.
