Abstract (en)

[origin: WO2015103051A1] A tableware vessel is provided that significantly improves the time efficiency of eating cookies and milk when the user desires the cookies to be thoroughly soaked in the milk. The vessel is elongated to permit simultaneous side -by-side soaking of multiple cookies. A uniquely configured sloped floor allows the volume of milk to be limited to the quantity desired by the user. The sloped floor guides the cookies from one end of the vessel to the other as they soak. The user can then remove each thoroughly soaked cookie, in sequence, from the scooping end of the vessel, where the floor is lowest.
