Abstract (en)  
[origin: WO2015101879A1] A dishwasher rack accessory has a body (20) with a grid-like portion (21) for supporting items to be washed, and means for removable coupling to a dishwasher rack. At least one first part (28) of the grid-like portion is substantially flat for defining a first generally horizontal resting plane for items to be washed. The first part (28) of the grid-like portion (21) includes two walls (24) shaped for defining a recurrent pattern that comprises an alternation of crests (24a) and valleys (24b). The two shaped walls (24) extend facing each other between two opposite sides of the grid-like portion (21) in such a way that the facing valleys (24b) of the two shaped walls (24) define between them a plurality of receptacles for positioning respective items to be washed.
