Abstract (en)  
[origin: US2015182781A1] An exercise machine includes a frame pivotally connected to a stationary horizontal base. A first foot pedal and a second foot pedal are attached to the frame and arranged to travel along reciprocating paths. The exercise machine also includes a resistance mechanism connected to the frame and arranged to resist movement of the first foot pedal and the second foot pedal along the reciprocating paths. An angling mechanism is arranged to selectively angle the frame by pivoting the frame with respect to the stationary horizontal base.
