Abstract (en)

[origin: WO2015101719A1] The invention relates to a side element for forming a casting mould. The side element (12) includes a basic element (14) and an additional element (15). The side element (12) also includes means (16) for attaching the basic element (14) and the additional element (15) to each other, in order to alter the height of the side element (12). The additional element (15) is arranged to form part of the side element (12) and the means (16) are arranged to form adjustment means (17) for adjusting the height of the side element (12). Between the basic element (14) and the additional element (15) there is a gap (40), which is arranged to be adjustable using the adjustment means (17), according to the insulation (42) belonging to the double-shell panel (41) being manufactured using the casting mould.
