Abstract (en)  
[origin: WO2015101723A1] The segmented structure (1) comprises at least two panels (2, 3, 4), a first panel (2) referred to as main panel and a second panel (3, 4) referred to as secondary panel, and also at least one deployment device (5), the deployment device (5) having a connecting arm (6) secured to the rear face (3B, 4B) of the secondary panel (3, 4) and connected to the rear face (2B) of the main panel (2), and a movement system (8) comprising a rotation unit that is able to generate a rotation of the connecting arm (6) about a reference axis, and a translation unit that is able to generate a movement of the connecting arm (6) in translation along this reference axis, so as to be able to bring the secondary panel (3, 4) into a stowed position (P1) or into a deployed position.
