Abstract (en)

[origin: WO2015068015A1] Method to control regulation parameters in internal combustion engine with spark-ignition, comprising concurrent ignition advance angle and fuel dose control, characterized in that the temperature of exhaust gas is measured in the exhaust duct of each cylinder individually, and on the base of temperature measurement, the ignition advance angle value and fuel dose are adjusted individually for each cylinder in order to maintain required engine working parameters with changes in energetic properties of the supplied fuel.
