Abstract (en)

[origin: WO2015096912A1] The present invention relates to a cooling device (1) comprising a body (2), a rear wall (3) and two opposite side walls (4) that surround the body (2), more than one channel (5) that is situated on the side walls (4) and whereon the shelves are seated, and a holder (6) having two supports (7) extending along the side walls (4) of the body (2) and more than one wire (8) that are disposed on the supports (7) so as to extend over the opposite supports (7) and whereon the items are placed, and when the holder is not desired to be used, the wires are moved by the user and rested against the rear wall thus enabling the volume inside the cooling device to be used flexibly.
