Abstract (en)

[origin: WO2015101442A1] In order to improve the accuracy of a density monitor (22) for monitoring a gas density in a test volume, the density monitor (22) of the invention comprises a membrane (24) which is connected to the test volume in such a way as to move when the gas density in the test volume changes, and a membrane movement sensing device (26) that is connected to the membrane (24) so as to convert a movement of the membrane into an electric signal, the membrane movement sensing device (26) being coupled to the membrane (24) by means of a transmission element (28) in order to mechanically amplify the membrane movement path.
