Abstract (en)

[origin: WO2015101894A1] A device (15) for inspecting an alternator of a plant for electric energy production is provided with a probe (17); first moving means (20) configured for moving the probe (17) along a moving axis (V) lying on a moving plane; and at least a first driving element (24, 44, 45) shaped for deflecting the probe (17) in a first direction (D1, D2, D3) transversal to the moving axis (V) on a first side of the plane.
