Abstract (en)  
There is provided an open type compressor 1 including: a scroll compression mechanism 5, a lip seal 9 that prevents leakage of fluid, a sub bearing 8 disposed on a side closer to the scroll compression mechanism 5 than the lip seal 9, and supporting the drive shaft 6, a cylindrical housing 2 housing the scroll compression mechanism 5, and a front housing 3 mounted so as to block an opening part 2a of the housing 2 and holding the sub bearing 8 and the lip seal 9 on an axis X, characterized in that the front housing 3 is formed with an oil supply groove 3a for communicating a first space S1, which is located on a side of the scroll compression mechanism 5 with respect to the sub bearing 8 and communicated with the suction port 25, with a second space S2, which is located on a side of the lip seal 9 with respect to the sub bearing 8.
