Abstract (en)
[origin: EP3091304A1] An air-conditioner includes a unit main body (5) which is suspended in a roof space (4) of a building via a plurality of hanging tools (31), and accommodates an indoor heat exchanger (22) and a blower (21), and a plurality of hangers (32) which are provided in an upper structure (6) constituting an upper part of the unit main body (5), and are connected to lower end portions of the hanging tools (31). The upper structure (6) includes an upper board portion (6a) which extends horizontally. Each hanger (32) includes a connection portion (33) connected to the corresponding hanging tool (31), a first securing portion (34) secured to the upper structure (6) via a fastener (47) in a state where the first securing portion overlaps with the upper structure (6), and a second securing portion (35) which extends from the first securing portion (34) integrally, and is structured so as to overlap with the upper board portion (6a) from an upper side.
