Abstract (en)

The present invention relates to a method for protection of containers of ATM dispenser which, using the electronic connection and operating state update between at least one protection device for containers of the ATM dispenser (10) and at least one container having means for neutralization of values (200) associated with an ATM (400), achieves a technical solution to prevent improper activation of means for neutralization of values during the maintenance operation by an operator. The present invention also includes a device suitable for implementing the method of protection for containers of the ATM dispenser (400).
