Abstract (en)

[origin: WO2015104665A1] The separator device (10) is associated with a known group for feeding granular or powder material (3) wherein tube suction means (4) are adapted to draw granular or powder material (M) through a lower inlet mouth (4B) and to project it at speed towards a feeding zone (A) situated downstream. The separator device (10) comprises at least one stirrer member (11), arranged in front of said lower inlet mouth (4B) and driven by a relative actuator (12) according to a pre-established movement cycle, with said stirrer member (11) adapted to apply, to the abovementioned granular or powder material (M), dynamic actions aimed to prevent the spontaneous aggregation of the grains of the same material (M) located therein, or to break up possible previously formed lumps.
