Abstract (en)

[origin: WO2015105884A1] The playback of media by a playback device is controlled by input gestures. Each user gesture can be first broken down into a base gesture which indicates a specific playback mode. The gesture is then broken down into a second part which contains a modifier command which determines the speed for the playback mode determined from the base command. Media content is then played using the specified playback mode at a speed determined by the modifier command.
