Abstract (en)
[origin: US2016310767A1] The present invention concerns a belay device, which is characterized by particularly safe handling. The invention provides a belay device (2), comprising a braking device (6) and a blocking device (8), whereby the blocking device (8) comprises a movable rope holding element (12, 14), which is designed to be moved by a rope (16) being held on it, whereby the blocking device (8) is designed in a blocking state to block a movement of the rope holding element (12), whereby in a securing case the blocking device (8) transitions into the blocking state, whereby a securing case exists when a movement parameter of the movement of the rope holding element (12, 14) of a movement parameter set lies outside a predetermined safety range of the movement parameter assigned to the respective movement parameter.
