Abstract (en)

[origin: WO2015150094A1] The invention relates to a passenger rail vehicle comprising at least one step platform (1) which can be moved linearly, which is arranged in a mounting area (7) of the rail vehicle and which is used to bridge a gap in the horizontal direction between the mounting area (7) of the rail vehicle and a platform (5). According to the invention, the step platform (1) comprises a front section (2) which forms one part of the step surface (13) of the step platform (1), said front section (2) being mounted about a horizontal axis (10) so that it can move on the step platform (1), for forming a ramp between the remaining step surface (14) of the step platform (1) and the platform (5).
