Abstract (en)
[origin: WO2015106784A1] The invention relates to a motor vehicle door-handle comprising a handle (10) able to be displaced from a rest position into an actuation position, in which a handle hook (11) arranged on the rear side of said handle (10) is kinematically coupled, when mounted, to a deflection lever (30) that acts directly or indirectly on a motor vehicle door lock during displacement from the rest position into the actuation position, said deflection lever (30) being retained in a pre-assembly position by means of a stopping element for as long as the handle hook (11) has not been brought completely into its final assembly position, and said stopping element being displaced from the stopping position into a release position by the handle hook (11) as this is brought into its assembly position.
