Abstract (en)  
[origin: CN106166045A] The invention relates to a suction nozzle for a vacuum cleaner for sucking up dirt and/or dust from a floor by means of a suction air flow, comprising a housing (1), a suction chamber (3) formed inside the housing (1), a suction channel (4) for guiding the suction air flow and leading to the suction chamber (3), and a suction mouth (5) as the bottom opening of the suction chamber (3), wherein the suction mouth (5) has a central suction mouth section (6) and two lateral suction mouth sections (7) flanking the central suction mouth section (6), and the suction mouth (5) is designed such that a proportion of greater than or equal to 40% but less than or equal to 65% of the suction air flow flows through the central suction mouth section (6).
