Abstract (en)
[origin: EP3095609A1] Provided is a recording apparatus (1) provided with a recording head (7) that includes a nozzle (N) and discharges liquid through the nozzle on the basis of image data, and when the recording head discharges the liquid onto a recorded medium (P) on the basis of pixel data constituting the image data and corresponding to any one of recording target pixels, the liquid is discharged such that the liquid landed on the recorded medium indicates any one of a plurality of image density levels. The recording apparatus configured in this manner makes it possible to perform recording at a plurality of image density levels on the basis of only a single set of image data.
