Abstract (en)

[origin: EP3095740A1] A conveyed-material separation device (100) includes an air jetting unit (2A to 2C) and a retaining unit (3A to 3F). The air jetting unit jets air to stacked conveyed materials to float an end of a conveyed material. The retaining unit (3A to 3F) retains and separates the conveyed material floated by the air jetting unit (2A to 2C). A position of the retaining unit is changeable according to a width dimension of the conveyed material in a width direction perpendicular to a floating direction of the conveyed material.
