Abstract (en)

[origin: EP3095921A1] The invention refers to a foundation for wind turbine tower and the pre-assembly method for the tower, in which the tower comprises sections (4) divided into shell segments (5), and where the foundation comprises a pile cap (1) with an upper base (12), a lower base (10) and an slanted surface (13), with the upper base (12) having a smaller area than the lower base (10). The foundation comprises: - a set of support elements that extend above the slanted surface (13) of the pile cap (1) arranged so that the clear surfaces (24) of these support elements provide a support surface for the shell segments (5) for the pre-assembly of a section (4), and - a set of slender connection elements (3) that are connected to the pile cap (1) and whose open end (31) is intended to connect to the shell segments (5) of a section (4).
