Abstract (en)
[origin: WO2016184675A1] The invention relates to an electrical heating device (1), in particular for a motor vehicle, comprising at least one heating element (9) and at least one control device (3) with a housing (2), at least one printed circuit board (4) with a first printed circuit board section (5) and a second printed circuit board section (6), and at least one first plug device (7) and at least one second plug device (8), wherein the two plug devices (7, 8) function to connect the at least one heating element (9) to the control device (3), wherein the housing (2) only partially accommodates the at least one printed circuit board (4), wherein the first printed circuit board section (5) is arranged in the housing (2) and the second printed circuit board section (6) protrudes out of the housing (2), and the at least one first plug device (7) is connected to the second printed circuit board section (6) and the at least one second plug device (8) is connected to the heating element (9).
