Abstract (en)
[origin: WO2015110501A1] The invention relates to a device for separating blood into the components thereof and to a method therefor and to the use of said type of device. Said device contains a magnetic drive device which offsets a container in rotation about the axis thereof, said container having at least one open end and has at least one inlet in said end and said container is mounted so that it can magnetically suspended.
