Abstract (en)
[origin: WO2015110412A1] The invention relates to a rescue apparatus (1) having a textile descent rope (6), having a rope clamp (8), which is threaded on the descent rope (6), having a safety rope (13), having a connecting means (10) and having a descent device (9), which is threaded on the descent rope (6), in order to rescue an individual (2), wherein the descent rope (6) has a fastening end (7), which can be fastened at a point of attachment (3), the safety rope (13) is configured from a fire-resistant material, which gives it a functional integrity of ≥ 5 minutes, and has a first end (14) and a second end (16), the safety rope (13) connects the fastening end (7) to the rope clamp (8) and has a length (17) between the first end (14) and the second end (16) of ≤ 30 m, the connecting means (10) connects the descent device (9) to the rope clamp (8) and the connecting means (10) has a tensile strength of ≤ 300 N.
