Abstract (en)
[origin: WO2015110761A1] The present invention relates to a telescopic box and to a display stand comprising at least two of these boxes, the box according to the invention being in two parts and comprising a base and a cover that nests over the base by sliding vertically, the box passing from a closed position to an extended position by the cover being slid with respect to the base, the base and the cover comprising panels that are connected together by slots that form articulations, wherein at least one of said panels comprises means for allowing the cover to take up a raised position and comprises means for forming at least one lateral distribution opening in said box. The present invention also relates to a method for converting the box according to the invention into a display.
