Abstract (en)

[origin: WO2015110586A1] The invention relates to a device for producing warning or indicating signals, wherein at least one first component (1), which comprises a control module (6) and a radio module (8) and at least one detector (5), and at least one second component (2), which has a coding (4) that indicates the second component, are provided. The radio module (8) is designed to transmit a radio signal to a higher-level monitoring system if the detector (5) of the first component (1) no longer detects the coding (4) of the second component (2). In particular, the invention can relate to a fire extinguisher (10) anchored in a retainer (9).
