Abstract (en)  
An apparatus for dispensing bead insulation into cavity walls, the apparatus comprising: a dispensing head, a bead container connected to said dispensing head, bead transportation means arranged for transporting said dry bead insulation from said bead container to said dispensing head, an adhesive container connected to said dispensing head, adhesive fluid transportation means arranged for transporting said adhesive fluid to said dispensing head, wherein said apparatus further comprises a dry bead flow meter arranged for determining a measure for a flow rate of said transported dry bead insulation, an adhesive fluid flow meter arranged for determining a measure for a flow rate of said transported adhesive fluid, and a control unit in electronic communication with said dry bead flow meter and said adhesive fluid flow meter, and arranged for determining and providing a ratio of transported dry bead insulation to transported adhesive fluid based on said determined measures.
