Abstract (en)
A container lid which can control the degree of opening at a mouth (2) of a container (1) in a state where it is joined to the mouth of the container. The container lid includes: a rotating body (10) detachably joined to a mouth of a container in a spiral manner; a cover (20) of which the end is connected to one side of the rotating body to open and close the mouth of the container; an insertion part (30) formed in the cover to be inserted and fixed into the mouth of the container so that the cover can close the mouth of the container; a hinge part (40) of which the end is connected to one side of the rotating body to support the opening and closing actions of the cover; and a pressing part (50) formed on the cover to be pressed to the mouth of the container by rotation of the rotating body so that the degree of opening of the cover is controlled.
