Abstract (en)  
[origin: EP3098339A1] A pull-down device for a knitted fabric that has a simpler configuration than the conventional device and that can be easily installed with respect to the flat knitting machine is provided. A pull-down device 100 for a knitted fabric includes a pair of base sections 1, a guiding plate 2 arranged at a position facing a knitted fabric passing path 101 on an upper side of each base section 1, and a catching/pull-down mechanism 3 for catching the knitted fabric drooped to a position facing the guiding plate 2 and pulling down the knitted fabric toward a lower side. In the pull-down device 100 for the knitted fabric, the base section 1 is fixed to the flat knitting machine. The pull-down device 100 of the knitted fabric includes an opening/closing mechanism 4 for displacing at least a part of each guiding plate 2 between a closed position which is proximate to the knitted fabric passing path 101 and an open position which is further separated from the knitted fabric passing path 101 than the closed position.
