Abstract (en)

[origin: EP3098340A1] A textile machine (M) fed by a plurality of yarns, each subjected to a sensing device (AF1, AF2, AF3; PF1, PF2, PF3; S1, S2, S3) that is adapted to generate a stop signal upon the occurrence of a critical event, and controlled by a monitoring device (MD) which is connected in order to exchange data with the sensing devices and in order to stop the textile machine (M) upon reception of the stop signal from at least one of them; the monitoring device (MD) is provided with wireless connectivity in order to communicate with at least one mobile terminal (MT1, MT2, MT3), and following the reception of the stop signal, it sends an alarm signal to the mobile terminal (MT1, MT2, MT3), which generates as a consequence an alert for the user.
