Abstract (en)

[origin: EP3098785A1] The present invention relates to a system and method for controlling the operative conditions of a means of transport, The system comprises: - an information acquisition means (11) for obtaining digital data with information relating to the number of persons (1) present in a specific area of interest (Z) close to an access to the means of transport (10), without revealing the identity; - a computing unit (12) for processing said obtained digital data performing a first calculation of the number of persons (1) present in said specific area of interest (Z); and - a control unit of said means of transport (10) for dynamically modulating the operative conditions of the means of transport (10) including variation of its speed or adaptation of the transport units forming it or its frequency according to at least one value resulting from said first calculation.
