Abstract (en)

[origin: WO2015113633A1] A seat cushion length adjusting device (10) comprises a support (11), an adjusting member (12) displaceably mounted to the support (11) and configured for attachment to at least a portion of a seat cushion, and an actuator. The actuator is coupled to the support (11) and the adjusting member (12). The actuator is configured to displace the adjusting member (12) relative to the support (11). The actuator comprises a power drive (31), a speed reduction gearing, and a motion conversion mechanism (41) for converting a rotational motion of an output of the speed reduction gearing into a linear displacement between the adjusting member (12) and the support (11).
