Abstract (en)

[origin: US2015210466A1] A dispensing system for a plurality of sanitary tissue products is provided. The dispensing system includes a soft-sided package made of a outer wrap having a 1% MD secant modulus to caliper ratio of about 5 MPa/μm or less. The system optionally comprises a sleeve that substantially surrounds the soft-sided package and is made of a material that has greater rigidity than the outer wrap of the soft-sided package. The sleeve includes indicia in a reading orientation. Both the soft-sided package and the sleeve have a height dimension and both may be oriented vertically. The height of the sleeve can be less than the height of the package. The dispensing system may also include a substantially horizontal shelf and a portion of the sleeve may be in contacting relationship with the shelf.
