Abstract (en)
[origin: WO2015113171A1] In an embroidery machine, supporting beams (121) are mounted on the frame supports (19) so as to be pivotable about a horizontal axis B. Roller supports (113) are arranged in a vertically adjustable manner at the ends of the supporting beams (121) and can be pressed against the fabric roller (17) so as to counteract sagging of the loaded fabric roller (17).
