Abstract (en)
[origin: WO2015110120A1] The invention relates to a heat pump, comprising a housing (1) through which ambient air flows, a flow guide (2) for the ambient air, which is arranged in the housing (1), and a sound-emitting heat pump component (3) that is associated with the flow guide (2) and interacts with the ambient air. According to the invention, the flow guide (2) is designed such as to surround the heat pump component (3) at its vertical sides like a sheath, thereby producing a sheath flow of ambient air in the housing (1).
