Abstract (en)
[origin: WO2015113961A1] The invention relates to an arrangement of an accessory part (20) on a flange component (10), wherein the flange component (10) has a wall side (11) for fastening to a wall and an outer side (12), a recess (13) is provided in the edge region of the wall side (11), a connecting element (14) is arranged in the region of the recess (13), the accessory part (20) has a base plate (21), which has a wall side (22) and an outer side (23), and a tab (25) having an opening (24) is provided in the edge region of the base plate (21). According to the invention, the accessory part (20) is slid onto the wall side (11) of the flange component (10) in such a way that the connecting element (14) engages in the opening (24) of the tab (25) and the tab (25) engages in the recess (13) of the flange component (10) such that the flange component (10) and the accessory part (20) are arranged next to each other and are connected to each other in a form-closed manner such that the accessory part (20) can be clamped between the flange component (10) and a wall in the region of the tab (25) when the flange component (10) is fastened to the wall. In this way, an arrangement of an accessory part on a flange component is specified in which the flange component can be produced independently of the accessory component to be slid on and can be used universally and the accessory part can be securely connected to the flange component.
