Abstract (en)  
[origin: CN106235579A] An apparatus (1) for fastening a lock of hair comprising: a gripping means (2), a housing (10) attached to the gripping means and having an inner wall (13), said housing (10) comprising: a mandrel (12) substantially surrounded by the inner wall (13), an insertion opening (15) of the wick, said insertion opening (15) being formed through the inner wall (13) and an extraction opening (16) of the loop, said extraction opening (16) being formed through the inner wall (13) at the free end of the mandrel (12), a retractor (17, 17') to rotate around the mandrel (12) for winding the hair strand around the mandrel (12) According to the invention, said retractor (17, 17') comprises a hollow body (21, 21') having a surface of a body of revolution, - surrounding the mandrel (12) at least partially in its length to form therewith an inner winding chamber (40) to the hollow body (21, 21') from which the looped wick can exit the device (1) through said extraction opening (16), - forming with the inner wall (13) an outer winding chamber (50) to the hollow body (21, 21') into which is introduced the lock of hair through the insertion opening (15).
