Abstract (en)

The invention is a hail guard for motor cars, comprising a tubular structure or a section bar structure (S1, S2, S3) to which a protection net (R) is fixed, said structure (S1, S2, S3) comprising: two generically linear supporting bases (S1) whose ends (S1a) are generically inclined upwards; four supports (S2) connected and fixed to said supporting bases (S1) in such a way that they substantially face upwards; two net holding elements (S3) suited to be connected and fixed to the upper ends (S2b, S2'b) of two right and left supports (S2, S2') in such a way that they substantially lie on a plane that is orthogonal to the supporting bases (S1). The protection net (R) is fixed to said net holding elements (S3) and kept tensioned by the entire structure (S1, S2, S3).
