Abstract (en)

[origin: EP3101754A1] A charging mode switching circuit and method in the field of mobile terminals. The charging mode switching circuit is coupled to a cell and is further externally coupled to a quick charge adapter. The charging mode switching circuit comprises: a switching module (3); a first controller (1), used for receiving a charge command, further used for receiving a quick charge command from a first data end via a data interface end of the switching module (3), and further used for sending a connect command from a third control end upon receiving the charge command and receiving the quick charge command; a second controller (2), used for sending the charge command to the first controller (1) upon detecting connection of the quick charge adapter from a second data end via the data interface end of the switching module (3); and a switch circuit (4), used for connecting a charging end and a cell end upon receiving the connect command from a first controlled end, so that the quick charge adapter charges the cell of a mobile terminal through the switch circuit (4).
