Abstract (en)  
[origin: CA2938543A1] The invention relates to a sporting device (1), comprising a carrier (3) for a coupling device (25) for accommodating a user and comprising at least one distributing device (2) for the loads and/or forces to be transmitted to the sporting device (1), which at least one distributing device (2) connects the carrier (3) to the sporting device (1) by means of a joint assembly, which has at least one pivoting arm (4, 5; 6, 7), which is pivotably connected, in each case by means of a joint (8, 9; 10, 11), to the sporting device (1) at one arm end of the pivoting arm and to the carrier (3) at the other arm end of the pivoting arm. The carrier (3) can be moved from a starting position to a balancing position, in which the carrier is brought closer to the sporting device (1), against the restoring force of at least one elastic restoring element. The sporting device (1) according to the invention is characterized in that the at least one restoring element is an elastically deformable spring element (12; 13), which is retained on the carrier (3) at one end and on the sporting device (1) at the other end.
