Abstract (en)

[origin: WO2015114449A1] The invention relates to a tool head element (1) for producing a tool head (2) which comprises at least one cutting edge (9) and which can be arranged in a tool receiving means (14). The tool head element (1) comprises at least one tool head portion (3) and at least one securing portion (4) which adjoins the tool head portion (3) and which has a tapering section (6) that runs in a conical manner in particular. The tool head portion (3) comprises at least one machining region (8) which can be machined such that the tool head element (1) forms a tool head (2) for a reaming tool or a countersinking tool or a boring tool, in particular a tool for boring open holes, or a milling tool. The invention also relates to a tool head (2) made of the tool head element (1) and to a tool receiving means (14) for the tool head (2).
