Abstract (en)

The invention discloses a self-inking stamp with reversible double-side stamp pad, including an upper bracket and a stamp pad, printing dial seat and spring sleeved in a lower bracket; chute and clamping clock are equipped on both sides of upper bracket; guiding groove is provided on both sides of lower bracket; the stamp pad is the rectangle box arranged on lower bracket and connected to the lower bracket with woggle joint; the upper bracket is sleeved into the lower bracket and its guiding groove is connected to chute by slip joint. It is characterized in that a separating board is placed in the middle of the rectangle frame of the said stamp pad, and the separating board separates the stamp pad into the upper stamp box and the lower stamp box; when the stamp pad is turned over and the lower bracket is inserted, it can satisfy the affixing requirements of different stamps. Compared with the existing technology, the invention is characterized by single stamp with multiple usages, flexible application of different stamp-pad inks to the same stamp as required, truly embodying the merit of single stamp with multiple usages, easy to carry and storage, simple structure, user-friendliness, thereby improving the work efficiency and reducing the office expenses.
