Abstract (en)
[origin: EP3103933A1] The present invention relates to a method for manufacturing a wooden truss or truss part from two or more construction parts, such a truss or truss part and building provided therewith. The method according to the invention comprises the steps of: - determining a desired dimensioning of the truss or truss part; - determining in accordance with the desired dimensioning of the truss or truss part a configuration for a connection between individual construction parts of the truss or truss part with connecting parts, wherein determining a configuration for the connection comprises of dimensioning a number of mutually engaging finger-like elements of the connecting parts; - providing a clamping fit for the mutually engaging finger-like elements in the configuration; - providing a hook-like element on at least one of the connecting parts such that a form-fitting effect is realizable with the connection; and - realizing the connection and assembling the truss or truss part.
