Abstract (en)

A drain pan receives drain water generated by condensing air in a heat exchanger. The drain pan has a drain pan body (21) provided with an opening (21a) positioned to face an inlet port (14a) of the pump configured to pump out the drain water, a nozzle (24) formed in a tubular shape as a member separate from the drain pan body (21) and installed in the opening (21a), and a cap (26) formed of an optically transparent material and rotatably fitted to the nozzle (24) to cap an end of the nozzle (24) on first side in the nozzle extending direction.
